**This quality fertilizer provides primary plant nutrients for all broadleaf evergreens and acid loving plants. Prevents leaf yellowing. Contains bonus plant foods like Magnesium and Boron, in the right proportions. It promotes a lush green color and stronger root systems, and helps you nurture a vigorous plant.**

### HOW TO APPLY:

Established acid-loving plants should be fed in early Winter or early Spring and again in mid-summer. Rodo-gro should be evenly spread 4 lbs. per 100 sq.ft. of soil beneath these acid requiring plants. One pound equals approximately 3 heaping cupfuls. Use a heaping cupful to a plant which spreads 3 ft x 3 ft. If the area around the plant is mulched, remove mulch before spreading Rodo-Gro.

NOTE: Azaleas, Rhododendrons and Laurel are shallow rooted plants. Keep the roots of these plants mulched, year round. Do not hoe or cultivate in the root area of these plants.
