PLOTSAYER Deer Repellent

Messina Wildlife's PLOTSAYER system is the only proven effective perimeter repellent system. Instead of broadcast spraying large blocks of land at a premium, farmers, hunters and homeowners can now get broadcast protection at a fraction of the cost. Messina Wildlife's PLOTSAYER features a reusable PLOTSAYER barrier ribbon hung 30" high that is treated with PLOTSAYER deer repellent to create a powerful physical and sensory perimeter barrier that axis, elks, moose, blacktail, mule, whitetail and other deer will not cross. The system works by smell and sight and will not be rendered ineffective after a heavy rain. Messina Wildlife's PLOTSAYER is endorsed by the North American Hunt Club and the Quality Deer Management Association. Available in pre-packed starter kits or as customized components, each starter kit comes with 840' of ribbon and one (1) pint of PLOTSAYER deer repellent concentrate, and it will protect one acre for approximately 100 days. Ribbon color does not effect results.
