

# Bunker Liners

**Sandtrapper I** ... is conveniently packaged in 56 inch rolls. It is easy to move and position around the course and can be cut to size using a standard utility knife. Total length per roll is 240 feet with total coverage of 1120 square feet.

**Sandtrapper II** was developed for those extreme, high-flashed bunkers so popular with today's top architects. In these settings, Sandtrapper II is the best choice for top performance and complete control over washouts - even on the steepest of slopes, while preventing sand contamination. At 16 ounces per square yard and 15mm thick this open, aggressive matrix grabs sand particles and keeps them in place while creating a layer where water can move quickly to the drainage system Like

**Sandtrapper GEO.** Where the prevailing concern is contamination, it provides total control at an extremely affordable cost. Since not all course designs have steep bunker faces, Sandtrapper GEO works best when you're building or maintaining bunkers with a relatively flat, broad style with grass faces or no face at all. It's 2.3 ounces per square yard and 23 mils thick. Sandtrapper GEO is packaged in rolls 102 inches wide and 1,000 feet long for a total coverage of 8,500 square feet.

**Sandtrapper MD** Combines high performance and affordability, addressing those needs where budgets are paramount. Sandtrapper MD is designed to work in bunker applications where slopes are moderate to extreme. It's affordability lends itself to lining an entire bunker for top performance. Sandtrapper MD is available in 56"x240

**SANDTRAPPER I, SANDTRAPPER II, & SANDTRAPPER MD are available in 90" width (custom order).**
